Ryan Joshua George

Bangalore, India

+91 7899045355 ryang0304@gmail.com Ryan George github.com/ryang030403

Full Stack Developer with hands-on experience building scalable web applications and APIs; skilled in React.js, Node.js, and distributed systems, with an academic foundation in machine learning and data science.

Experience

Grassroots Jan 2026 – Present

Full Stack Developer *Bangalore, India*

- Engineer and ship full-stack features end-to-end across a React.js/Node.js stack, supporting an active production user base
- Design and build RESTful APIs powering business-critical workflows, working closely with the team to keep response times low
- Partner with product, design, and QA teams in an Agile workflow to ship multiple releases per sprint with zero critical post-release bugs
- Own database schema design and integration, applying indexing and query optimization to improve query performance
- Streamline deployment workflows using CI/CD pipelines, shortening release turnaround time and reducing manual deployment steps

Enhancio Aug 2024 – Jan 2025

Front-End Developer Intern *Bangalore, India*

- Built and shipped responsive UI components in React.js and JavaScript used across multiple production pages, contributing to faster page load times
- Partnered with senior developers and designers to redesign core UI/UX flows to improve usability and user engagement
- Diagnosed and resolved cross-browser compatibility issues, ensuring consistent rendering across Chrome, Firefox, and Safari
- Built and integrated reusable front-end components consumed across multiple internal projects, reducing duplicate code

Projects

Distributed Real-Time Chat Application | *Node.js, WebSockets, MongoDB, Redis*

- Architected a real-time messaging platform load-tested to sustain 100 concurrent WebSocket connections with 5.4ms average message-broadcast latency
- Implemented JWT-based authentication, AES-256-GCM encrypted message payloads, and live push notifications validated across 100 concurrent active sessions
- Built concurrent multi-device session handling with a full automated test suite (smoke + load tests) verifying zero dropped messages under load

AI-Powered Resume Screening System | *Python, NLP, Scikit-learn*

- Built an NLP-driven candidate-ranking engine using TF-IDF semantic similarity scoring, achieving 88% shortlisting accuracy against a labeled validation set
- Engineered keyword extraction and resume-parsing pipelines that screen and rank a resume batch against a job description in under 15ms
- Automated candidate shortlisting with configurable similarity thresholds and top-K filtering, backed by a 6-test automated pytest suite

Cloud-Native Microservices E-Commerce Platform | *Node.js, Docker, MongoDB, SQL*

- Designed a distributed microservices architecture with 4 independently deployable services (user, product, payment, order) plus an API gateway, each with isolated data stores
- Built secure REST APIs with JWT authentication and Docker containerization for all five services, orchestrated via Docker Compose
- Load-tested the checkout saga to 50 concurrent transactions at 76.6 orders/sec with zero overselling, including a compensating-transaction rollback path for declined payments

Advanced Chess Analytics Engine | *Python, Data Structures & Algorithms*

- Built a high-performance analytics engine parsing and evaluating 50+ PGN game records in ~120ms using python-chess
- Implemented recursive move-tree analysis and a trained logistic-regression win-probability model achieving 68.5% held-out prediction accuracy on 1,446 labeled positions
- Engineered a recursive opening-classification engine covering 10+ major openings (Sicilian, French, Caro-Kann, QGD, KID, English) with win/draw/loss breakdowns per line

Education

Monash University Jan 2025 – Dec 2025
Master of Data Science (Coursework Completed) *Melbourne, Australia*

- Relevant Coursework: Machine Learning, Artificial Intelligence, Statistical Modeling, Data Analytics

Dayananda Sagar University 2021 – 2024
Bachelor of Computer Applications *Bangalore, India*

- Relevant Coursework: Data Structures, Algorithms, Databases, Computer Networks, Web Technologies

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C++, C, SQL, Go, PHP, HTML/CSS
Frameworks & Libraries: React.js, Node.js, Express.js, REST APIs, WebSockets
Databases: MongoDB, MySQL, Oracle SQL, Redis
Tools & Platforms: Git, GitHub, Docker, Postman, VS Code, Linux, Firebase, CI/CD
Core Concepts: Data Structures & Algorithms, OOP, System Design, Microservices Architecture, Database Design, Machine Learning, NLP
